Application/Control Number: 10/678,104

Art Unit: 3644

#### **DETAILED ACTION**

## Information Disclosure Statement

The information disclosure statement filed 3/1/04 fails to comply with 37 CFR 1.98(a)(1), which requires a list of all patents, publications, or other information submitted for consideration by the Office. It has been placed in the application file, but the information referred to therein has not been considered.

## Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because it contains legal terms such as "comprises" and "said". Correction is required. See MPEP § 608.01(b).

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Application/Control Number: 10/678,104

Art Unit: 3644

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baudu et al in view of Johnson et al or Johnson.

Baudu et al teaches a thrust reverser for a turbojet having doors controlled by electronic control unit, sensors 16a, 16b, 22, 24, 30, and 31 to measure the state of the devices in the thrust reverser system, FADEC 1 connected to electronic the control unit, drives from control actuators, mechanical blocking device 14a, and abutment locking device 21, but is silent on the two channels. However, Johnson et al teaches that two channels control in the FADEC is well known in the art. See figure 4 and column 4, lines 28-44. Johnson teaches two channels in the FADEC (see figure 4) are well known in the art.

It would have been obvious to one skilled in the art at the time the invention was made to have used a FADEC having two channels in Baudu et al's system as taught by Johnson et al or Johnson to create a more reliable system.

Please note that the use of more than one electronic control units (one being assigned to each door) involves the basic routine step that one skilled in the art would have made so as to provide redundancy to the system so that if one was to fail the other one can know and provide safe operation of the thrust reverser.

### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 3644

Christensen, Fage et al, Ahrendt, Dinger et al, Greune et al, Hardy et al, Repp, and Langson et al disclose thrust reversers.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tien Dinh whose telephone number is 703-308-2798. The examiner can normally be reached on 9-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Jordan can be reached on 703-306-4159. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
